

## 9장. 스프링 Web Security

*Security - login*

## ◆ 스프링 시큐리티

일반적인 웹(JSP)에서는 세션이나 쿠키등을 이용하여 로그인을 하는데, 스프링은 인터셉터(Interceptor)등을 이용한다.

기본 동작 방식은 서블릿의 여러 종류의 필터와 인터셉터를 이용해서 처리된다.

필터는 서블릿의 필터를 의미하고, 인터셉터(Interceptor)는 스프링에서 필터와 유사한 역할을 한다.

인터셉터는 스프링의 빈으로 관리되면서 스프링의 컨텍스트 내에 속한다.

# Spring Web Security

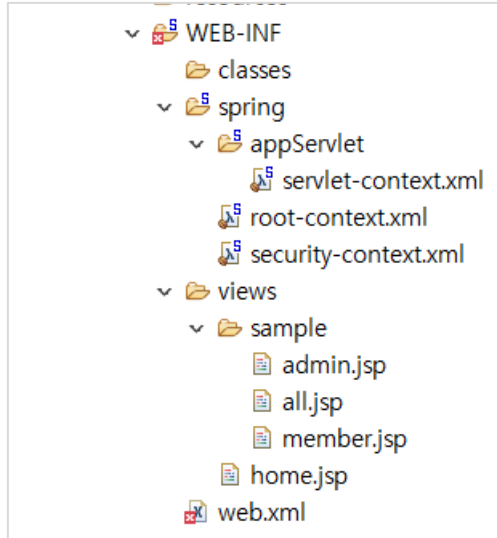

## ◆ 스프링 AOP pom.xml 에 security 관련 라이브러리 추가

```
<dependency>
  <groupId>org.springframework.security</groupId>
  <artifactId>spring-security-core</artifactId>
  <version>5.2.2.RELEASE</version>
</dependency>
<dependency>
  <groupId>org.springframework.security</groupId>
  <artifactId>spring-security-config</artifactId>
  <version>5.2.2.RELEASE</version>
</dependency>
<dependency>
  <groupId>org.springframework.security</groupId>
  <artifactId>spring-security-web</artifactId>
  <version>5.2.2.RELEASE</version>
</dependency>
```

# Spring Web Security

## ◆ security-context.xml 생성

Configuration Bean File로 생성

```
<?xml version="1.0" encoding="UTF-8"?>
<beans xmlns="http://www.springframework.org/schema/beans"
  xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
  xmlns:security="http://www.springframework.org/schema/security"
  xsi:schemaLocation="http://www.springframework.org/schema/security http://www.springframework.org/schema/security
    http://www.springframework.org/schema/beans http://www.springframework.org/schema/beans"
  >
  </beans>
```

# Spring Web Security

## ◆ web.xml에 등록

```
<context-param>
  <param-name>contextConfigLocation</param-name>
  <param-value>/WEB-INF/spring/root-context.xml</param-value>
  <param-value>/WEB-INF/spring/security-context.xml</param-value>
</context-param>
```

```
<!-- Spring Security -->
<filter>
  <filter-name>springSecurityFilterChain</filter-name>
  <filter-class>org.springframework.web.filter.DelegatingFilterProxy</
</filter>

<filter-mapping>
  <filter-name>springSecurityFilterChain</filter-name>
  <url-pattern>/*</url-pattern>
</filter-mapping>
```

# Spring Web Security

## ◆ security-context.xml 에 등록 및 서버 실행

```
<!-- 기본 서비스 -->
<security:http>

    <security:form-login/>
    <security:logout/>
</security:http>

<!-- 인증 및 권한 설정 -->
<security:authentication-manager>

</security:authentication-manager>
```

```
INFO: Initializing Spring DispatcherServlet 'appServlet'

```

# Spring Web Security

## ◆ 시큐리티 권한에 따른 URI 설계

- /sample/all -> 로그인을 하지 않은 사용자도 접근 가능
- /sample/member -> 로그인한 사용자만 접근 가능
- /sample/admin -> 로그인한 사용자들 중에서 관리자 권한을 가진 사용자만 접근 가능

# Spring Web Security

## ◆ 시큐리티 권한에 따른 URI 설계

```
@Log4j
@RequestMapping("/sample/*")
@Controller
public class SampleController {

    @GetMapping("/all") //localhost:8080/sample/all
    public void doAll() {
        Log.info("do all can access everybody");
    }

    @GetMapping("/member")
    public void doMember() {
        Log.info("logged member");
    }

    @GetMapping("/admin")
    public void doAdmin() {
        Log.info("admin only");
    }
}
```

```
src/main/java
├── com.spring.board
├── com.spring.board.impl
├── com.spring.common
├── com.spring.controller
│   ├── HomeController.java
│   └── SampleController.java
└── com.spring.user
```

# Spring Web Security

## ◆ 시큐리티 권한에 따른 URI 설계

```
<title>인증</title>
</head>
<body>
  <h1>/sample/all page</h1>
</body>
</html>
```

```
▼ views
  ▼ sample
    admin.jsp
    all.jsp
    member.jsp
    home.jsp
```

```
<title>인증</title>
</head>
<body>
  <h1>/sample/member page</h1>
</body>
</html>
```

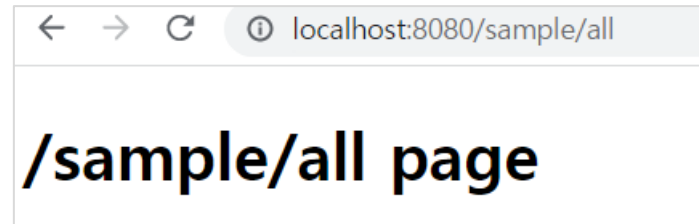

```
<body>
  <h1>/sample/admin page</h1>

  <a href="/customLogout">Logout</a>
</body>
```

# Spring Web Security

## ◆ 시큐리티 권한에 따른 URI 설계

# Spring Web Security

## ◆ 로그인과 로그아웃

### 권한 설정 - security-context.xml

```
<!-- URI 경로 접근 -->
<security:http>
    <security:intercept-url pattern="/sample/all" access="permitAll" />
    <security:intercept-url pattern="/sample/member" access="hasRole('ROLE_MEMBER')" />

    <security:form-login/>
</security:http>

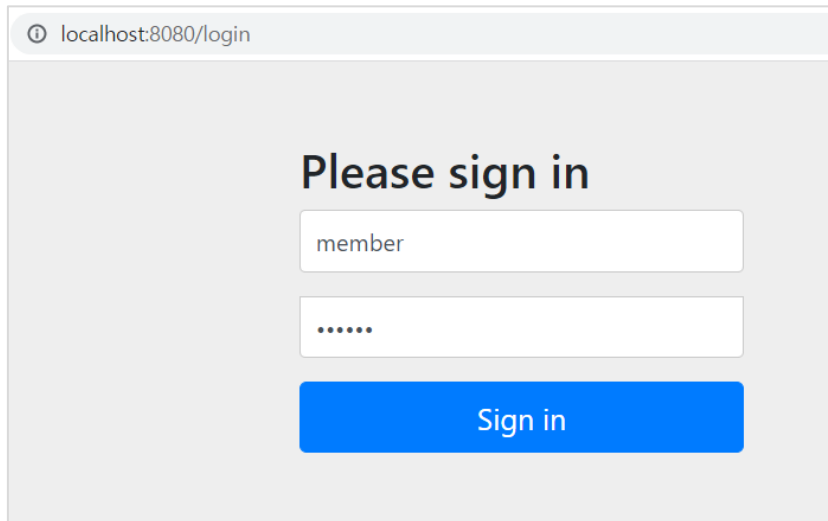

<!-- 인증 - 권한 -->
<security:authentication-manager>
    <security:authentication-provider>
        <security:user-service>
            <security:user name="member" password="member" authorities="ROLE_MEMBER"/>
        </security:user-service>
    </security:authentication-provider>
</security:authentication-manager>
```

# Spring Web Security

## ◆ 로그인과 로그아웃

- /sample/member로 요청(username- member, password-member)

localhost:8080/login

Please sign in

member

.....

Sign in

PasswordEncoder 클래스가 없어서 에러발생

```
SEVERE: 경로가 []인 컨텍스트의 서블릿 [appServlet]을(를) 위한 Servlet.service() 호출이 예외를 발생.  
java.lang.IllegalArgumentException: There is no PasswordEncoder mapped for the id "null"  
    at org.springframework.security.crypto.password.DelegatingPasswordEncoder$UnmappedIdPasswordEncoder.matches()  
    at org.springframework.security.crypto.password.DelegatingPasswordEncoder.matches(  

```

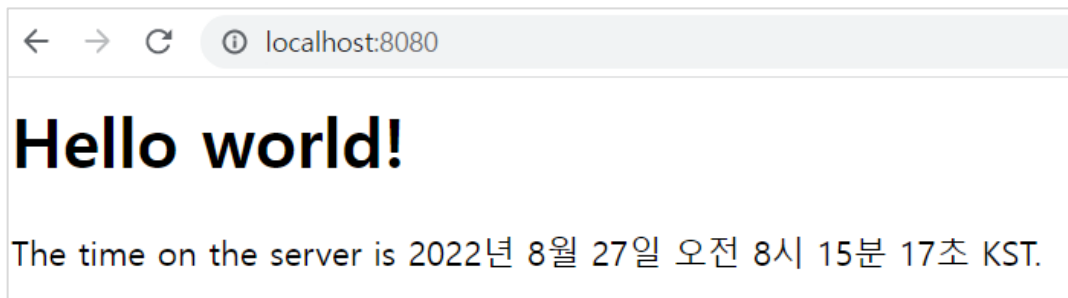

# Spring Web Security

## ◆ 로그인과 로그아웃

- 비밀번호앞에 {noop}를 붙이면 에러 해결됨

```
<security:authentication-provider>  
  <security:user-service>  
    <security:user name="member" password="{noop}member" authorities="ROLE_MEMBER"  
  </security:user-service>  
</security:authentication-provider>
```

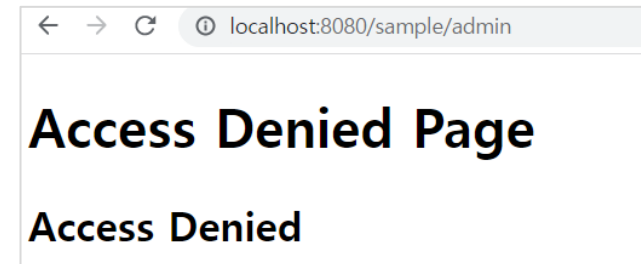

- 로그인후 '/' 경로로 이동함

# Spring Web Security

## ◆ 로그인과 로그아웃

- admin 사용자는 /sample/member, /sample/admin 모두 접근 가능
- member 사용자는 /sample/member에만 접근 가능
- ✓ member 사용자가 admin에 접근하면 에러 발생

```
<security:form-login/>
<security:logout/>
<!-- 에러 처리 -->
<security:access-denied-handler error-page="/accessError" />
</security:http>
```

# Spring Web Security

## ◆ 접근 에러 처리 1

```
@Log4j
@Controller
public class CommonController {

    @GetMapping("/accessError")
    public void accessDenied(Authentication auth, Model model) {
        log.info("access Denied : " + auth);
        model.addAttribute("msg", "Access Denied");
    }
}
```

```
<body>
    <h1>Access Denied Page</h1>

    <h2><c:out value="${msg}" /> </h2>
</body>
```

accessError.jsp

# Spring Web Security

## ◆ 접근 에러 처리 2

### - AccessDeniedHandler 인터페이스를 구현하는 경우

접근제한이 되었을 때 쿠키나 세션에 특정한 작업을 하거나 HttpServletResponse에 특정한 헤더 정보를 추가하는 등의 기능을 구현할 수 있음

```
@Log4j
public class CustomAccessDeniedHandler implements AccessDeniedHandler{

    @Override
    public void handle(HttpServletRequest request, HttpServletResponse response,
        AccessDeniedException accessDeniedException) throws IOException, ServletException {
        Log.error("AccessDeniedHandler");

        Log.error("Redirect.....");

        response.sendRedirect("/accessError");
    }
}
```

- ▼ com.spring.controller
  - > CommonController.java
  - > HomeController.java
  - > SampleController.java
- ▼ com.spring.security
  - > CustomAccessDeniedHandler.java
  - > CustomLoginSuccessHandler.java

# Spring Web Security

## ◆ 접근 에러 처리 2

- CustomAccessDeniedHandler를 빈으로 등록

```
<!-- CustomAccessDeniedHandler를 빈으로 등록 -->
<bean id="customAccessDenied" class="com.spring.security.CustomAccessDeniedHandler"/>

<!-- 기본 서비스 -->
<security:http>
    <security:intercept-url pattern="/sample/all" access="permitAll" />
    <security:intercept-url pattern="/sample/member" access="hasRole('ROLE_MEMBER')" />
    <security:intercept-url pattern="/sample/admin" access="hasRole('ROLE_ADMIN')" />

    <security:form-login/>

    <!-- 에러 처리 -->
    <!-- <security:access-denied-handler error-page="/accessError" /> -->

    <security:access-denied-handler ref="customAccessDenied" />
</security:http>
```

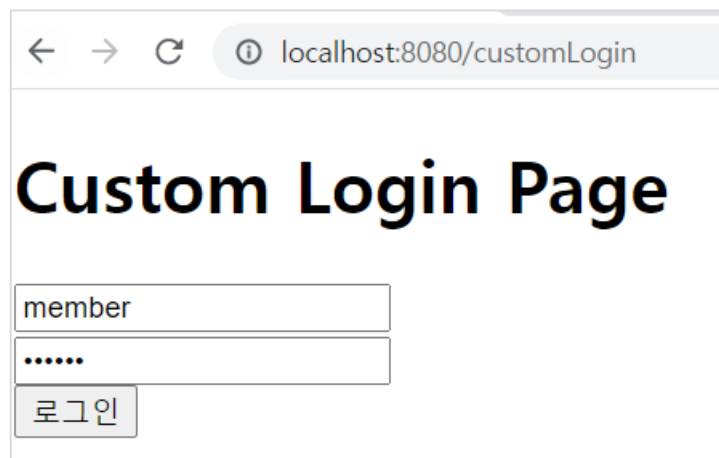

A yellow arrow points from the `ref="customAccessDenied"` attribute in the `<security:access-denied-handler>` tag to the `id="customAccessDenied"` attribute in the `<bean>` tag above. A red dashed box highlights the `ref="customAccessDenied"` attribute.

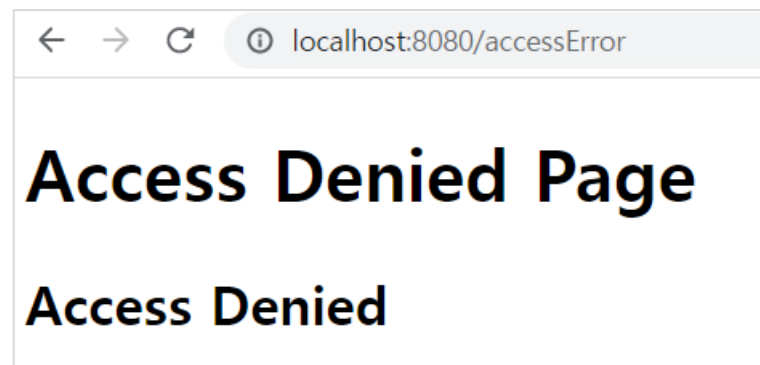

# Spring Web Security

## ◆ 접근 에러 처리 2

A screenshot of a web browser window showing a custom login page. The address bar displays 'localhost:8080/customLogin'. The page title is 'Custom Login Page'. It features a form with two input fields: the first is labeled 'member' and contains the text 'member'; the second is a password field with masked characters '.....'. Below the password field is a button labeled '로그인' (Login).

A screenshot of a web browser window showing an access denied page. The address bar displays 'localhost:8080/accessError'. The page content consists of the text 'Access Denied Page' in a large font, followed by 'Access Denied' in a slightly smaller font.

# Spring Web Security

## ◆ 커스텀 로그인 페이지

- 스프링에서 제공하는 로그인 폼을 사용하지 않고 직접 로그인 폼을 제작해서 사용하기

```
<security:form-login/>  
<!-- 로그인 페이지 직접 제작 -->  
<security:form-login login-page="/customLogin" />  
<security:logout logout-url="/customLogout" invalidate-session="true" />
```

# Spring Web Security

## ◆ 로그인 페이지 만들기 – CommonController.java

```
//로그인
@GetMapping("/customLogin")
public void login(String error, String logout, Model model) {
    Log.info("error: " + error);
    Log.info("logout:" + logout);

    if(error != null) {
        model.addAttribute("error", "Login Error Check Your Account");
    }

    if(logout != null) {
        model.addAttribute("logout", "LogOut!!");
    }
}
```

# Spring Web Security

## ◆ 로그인 페이지 만들기 – customLogin.jsp

```
<h1>Custom Login Page</h1>

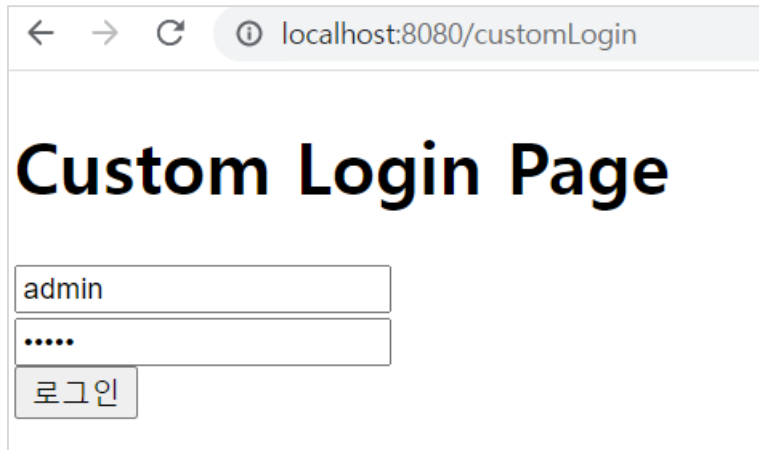

<h2><c:out value="${error}" /></h2>
<h2><c:out value="${logout}" /> </h2>

<form method="post" action="/login">
    <div>
        <input type="text" name="username" value="admin">
    </div>
    <div>
        <input type="password" name="password" value="admin">
    </div>
    <div>
        <input type="submit" value="로그인">
    </div>
    <input type="hidden" name="${_csrf.parameterName}" value="${_csrf.token}" />
</form>
```

# Spring Web Security

## ◆ 로그인 - /sample/admin으로 요청

localhost:8080/customLogin

### Custom Login Page

admin

.....

로그인

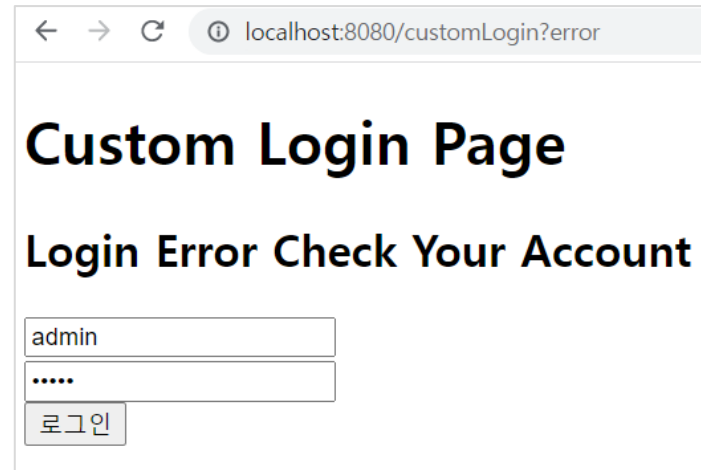

localhost:8080/sample/admin

### /sample/admin page

[Logout](#)

username or password가  
일치하지 않는 경우

localhost:8080/customLogin?error

### Custom Login Page

#### Login Error Check Your Account

admin

.....

로그인

## ◆ CSRF(Cross-site request forgery) 공격과 토큰

스프링 시큐리티에서 POST 방식을 이용하는 경우 필수적으로 CSRF 토큰을 이용한다. CSRF 공격은 "사이트간 요청 위조"라고 번역될 수 있다.

서버에서 받아들이는 정보가 특별히 사전 조건을 검증하지 않는다는 단점을 이용하는 해킹 공격 방식이다.

실제로 2008년에 국내 인터넷 A 쇼핑몰이 이 기법으로 관리자 계정을 탈취당해 개인 정보들이 유출되었다.

CSRF를 통해 단순히 게시물의 조회수를 늘리는 등의 조작부터 피해자의 계저을 이용하는 다양한 공격이 가능하다.

### ● CSRF 토큰

사용자가 임의로 변하는 특정한 토큰값을 서버에서 체크하는 방식이다.

서버에는 브라우저에 데이터를 전송할 때 CSRF 토큰을 함께 전송하다.

사용자가 POST 방식을 특정한 작업을 할 때는 브라우저에서 전송된 CSRF 토큰의 값과 서버가 보관하고 있는 토큰의 값을 비교하여 만일, 토큰의 값이 다르다면 작업을 처리하지 않는 방식이다.

# Spring Web Security

## ◆ 로그인 성공과 AuthenticationSuccessHandler

```
@Log4j
public class CustomLoginSuccessHandler implements AuthenticationSuccessHandler{

    @Override
    public void onAuthenticationSuccess(HttpServletRequest request, HttpServletResponse
        Authentication auth) throws IOException, ServletException {

        Log.warn("Login Success");

        List<String> roleNames = new ArrayList<>();

        auth.getAuthorities().forEach(authority -> { //람다식 반복문
            roleNames.add(authority.getAuthority()); //ROLE_ADMIN, ROLE_MEMBER 저장
        });
    }
}
```

# Spring Web Security

## ◆ 로그인 성공과 AuthenticationSuccessHandler

```
Log.warn("ROLE NAMES: " + roleNames);

if(roleNames.contains("ROLE_ADMIN")) {
    response.sendRedirect("/sample/admin"); //admin.jsp로 이동
    return;
}

if(roleNames.contains("ROLE_MEMBER")) {
    response.sendRedirect("/sample/member"); //member.jsp로 이동
    return;
}

response.sendRedirect("/"); //index.jsp로 이동
}
```

# Spring Web Security

## ◆ 로그인 성공과 AuthenticationSuccessHandler

```
<!-- CustomAccessDeniedHandler를 빈으로 등록 -->

    <button type="submit">로그아웃</button>
</form>
```

logout.jsp

# Spring Web Security

## ◆ JDBC를 이용하는 간편 인증/권한 처리

```
-- Spring security
CREATE TABLE users(
    username VARCHAR2(50) NOT NULL PRIMARY KEY,
    password VARCHAR2(50) NOT NULL,
    enabled CHAR(1) DEFAULT '1'
);

CREATE TABLE authorities(
    username VARCHAR2(50) NOT NULL,
    authority VARCHAR2(50) NOT NULL,
    CONSTRAINT fk_authorities_users FOREIGN KEY(username)
    REFERENCES users(username)
);

-- index 생성
CREATE UNIQUE INDEX ix_auth_username ON authorities (username, authority);
```

# Spring Web Security

## ◆ JDBC를 이용하는 간편 인증/권한 처리

```
-- users 추가
INSERT INTO users(username, password) VALUES ('user00', 'pw00');
INSERT INTO users(username, password) VALUES ('member00', 'pw00');
INSERT INTO users(username, password) VALUES ('admin00', 'pw00');

-- 권한 추가
INSERT INTO authorities(username, authority) VALUES ('user00', 'ROLE_USER');
INSERT INTO authorities(username, authority) VALUES ('member00', 'ROLE_MEMBER');
INSERT INTO authorities(username, authority) VALUES ('admin00', 'ROLE_MEMBER');
INSERT INTO authorities(username, authority) VALUES ('admin00', 'ROLE_ADMIN');
```

# Spring Web Security

## ◆ JDBC를 이용하는 간편 인증/권한 처리

```
<!-- DataSource 설정 -->
<bean id="hikariConfig" class="com.zaxxer.hikari.HikariConfig">
    <property name="driverClassName" value="oracle.jdbc.OracleDriver" />
    <property name="jdbcUrl" value="jdbc:oracle:thin:@localhost:1521:xe" />
    <property name="username" value="c##spring" />
    <property name="password" value="spring" />
</bean>

<bean id="dataSource" class="com.zaxxer.hikari.HikariDataSource"
    destroy-method="close">
    <constructor-arg ref="hikariConfig" />
```

# Spring Web Security

## ◆ JDBC를 이용하는 간편 인증/권한 처리

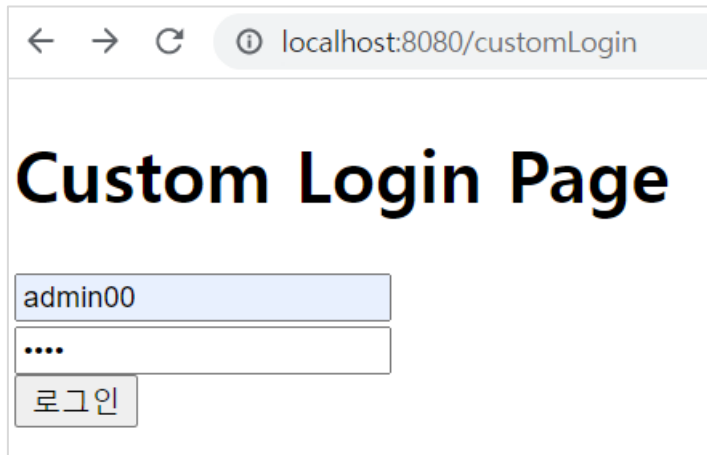

```
<!-- 인증 및 권한 설정 -->

## ◆ 쿼리를 이용하는 인증

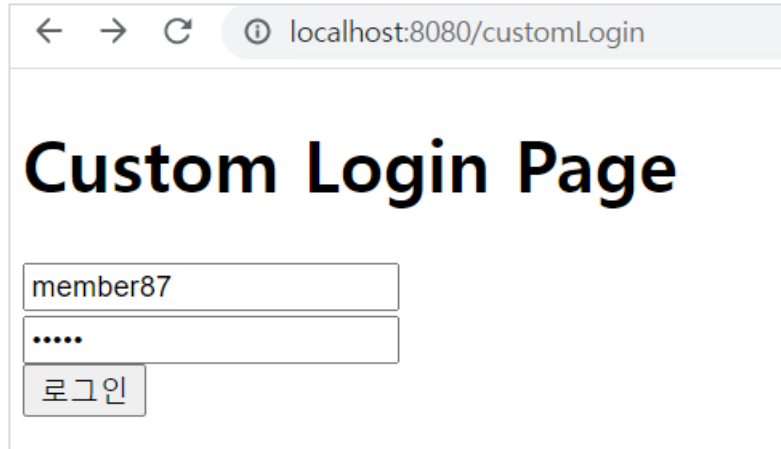

```
<security:authentication-provider>
  <!-- jdbc 연동 -->
  <!-- <security:jdbc-user-service data-source-ref="dataSource" /> -->

  <!-- 비밀번호 암호화 쿼리 사용 -->
  <security:jdbc-user-service
    data-source-ref="dataSource"
    users-by-username-query="select userid, userpw, enabled from
                           tbl_member where userid=?"
    authorities-by-username-query="select userid, auth from
                                   tbl_member_auth where userid=?" />
```

## ◆ Member87/pw87로 인증

A screenshot of a web browser window showing a "Custom Login Page". The address bar displays "localhost:8080/customLogin". The page contains a form with two input fields: the first contains the text "member87", and the second contains five dots. Below the input fields is a button labeled "로그인" (Login).

A screenshot of a web browser window showing the "/sample/member page". The address bar displays "localhost:8080/sample/member". The page content is the text "/sample/member page".
